English – Fluent | Arabic – Fluent

CAREER SUMMARY

Cyber Operations student graduating December 2026, with hands-on experience in vulnerability management, network defense, digital forensics, and incident response. Built a Python tool that parses nmap output, enriches each discovered service with CVE data from the NVD API, and scores findings by CVSS to produce prioritized remediation reports. Defended live enterprise infrastructure against a professional red team at WRCCDC, and placed top 100 nationally with my team in the Cyber Skyline CTF's OSINT and digital forensics track. Saudi national, fluent in English and Arabic, currently preparing for CompTIA Security+ and Network+.

EDUCATION & CERTIFICATIONS

Bachelor of Applied Science in Cyber Operations, University of Arizona | Expected December 2026

- Emphasis: Defense and Forensics
- Relevant coursework: Digital Forensics, Network Defense, Incident Response, Threat Intelligence, OSINT, Security Analysis

Certifications in Progress: CompTIA Network+ · CompTIA Security+ · AWS | Target: End of 2026

TECHNICAL SKILLS

Vulnerability Management: Nmap · NVD / CVE research · CVSS scoring and risk prioritization · Remediation reporting

Forensics & Analysis: Autopsy · FTK Imager · Wireshark · Disk Imaging · Chain of Custody · Evidence Preservation

Blue Team / Defense: Incident Response · Network Traffic Analysis · System Hardening · Rogue AP Simulation

Programming & Scripting: Python (REST APIs, XML parsing, automation) · Bash (basic)

Security Fundamentals: Networking basics · IAM & least-privilege concepts · AWS fundamentals (coursework in progress)

Operating Systems: Linux (CLI proficient) · Windows · Kali Linux

Frameworks: NIST Cybersecurity Framework · DFIR **Actively Learning:** SIEM tools · secure code scanning

PROJECTS & COMPETITIONS

Service-to-CVE Vulnerability Scanner, Personal Project (Python) | 2026

- Built a modular Python tool that parses nmap XML output, filters to open ports, and queries the NVD API to map each running service and version to known CVEs
- Scores every finding by CVSS, assigns a risk level from Critical to Low, and generates matching mitigation guidance per service
- Outputs a JSON feed for downstream tooling and a readable triage report, tested against a deliberately vulnerable host across 23 open services

Western Regional Collegiate Cyber Defense Competition (WRCCDC), Blue Team | 2024–2025

- Coordinated the team during competition, tracking assignments and ensuring injects were submitted before deadline
- Defended live enterprise infrastructure against a professional red team, keeping services running under sustained attack
- Completed timed security injects including firewall configuration, log analysis, and vulnerability patching

Rogue Access Point Security Research, University of Arizona Hackathon | 2023

- Built a rogue access point with a captive portal to simulate credential harvesting and man-in-the-middle attacks, using Linux, hostapd, and dnsmasq
- Demonstrated public Wi-Fi exploitation live to a non-technical audience; recognized by competition judges

Cyber Skyline CTF, OSINT & Digital Forensics | 2024

- Solved OSINT and digital forensics challenges under competition conditions using Autopsy, file carving, and metadata analysis
- Team placed in the top 100 nationally

Security Learning Platform, ASU Hackathon | 2023

- Helped build a gamified web tool teaching cybersecurity and programming basics to beginners

WORK EXPERIENCE

International Outreach Student Assistant, University of Arizona | 2023–2025

- Answered student and applicant emails on admissions, applications, and program logistics
- Coordinated outreach events for programs serving 200+ international students
- Communicated in both English and Arabic in a professional setting

Technical Support Intern, City High School | 2022 (15 weeks)

- Repaired hardware issues on student laptops, including screens, batteries, and ports, across 50+ devices
- Troubleshoot Wi-Fi and system settings issues, and provided tech support to staff and students

Informal Technical Shadowing, CIRRIIS: shadowed a software developer; early exposure to C# and internal tooling
| 2022
