English: Fluent | Arabic: Fluent

CAREER SUMMARY

I'm a Cyber Operations student at the University of Arizona, graduating in December 2026. I've built hands-on experience in network defense, digital forensics, and incident response through competitions and personal projects, including a Python tool I wrote that checks scanned network services against known CVEs. I helped defend a live network against a professional red team at WRCCDC and placed top 100 nationally in the Cyber Skyline CTF's OSINT and forensics track. I'm still early in my career, but I'm serious about growing in this field and currently working toward CompTIA Security+ and Network+. I'm a Saudi national, fluent in English and Arabic.

EDUCATION & CERTIFICATIONS

Bachelor of Applied Science in Cyber Operations, University of Arizona Expected December 2026

- Emphasis: Defense and Forensics
- Relevant coursework: Digital Forensics, Network Defense, Incident Response, Threat Intelligence, OSINT, Security Analysis

Certifications in Progress: CompTIA Network+ · CompTIA Security+ · AWS Target: End of 2026

TECHNICAL SKILLS

Security & Forensics: Nmap, Autopsy, FTK Imager, Wireshark, CVE/CVSS research and risk scoring, incident response, rogue AP simulation, NIST Cybersecurity Framework, DFIR

Programming & Systems: Python (REST APIs, XML parsing, automation), Bash, Linux/Kali Linux, Windows

Cloud & Security Fundamentals: AWS fundamentals (coursework in progress), IAM and least-privilege concepts, networking basics

Currently Learning: SIEM tools, secure code scanning, LLM/AI security testing

PROJECTS & COMPETITIONS

Service-to-CVE Vulnerability Scanner, Personal Project (Python) 2026

- Built a Python tool that reads nmap scan results, pulls out the open ports, and checks the NVD API to match each service and version to known CVEs
- Scores every finding using CVSS, labels the risk level from Critical to Low, and gives fix suggestions for each service
- Outputs a JSON file other tools can use, plus a plain-language report, tested on a vulnerable practice machine across 23 open services

Prompt-Injection Detection Skill, Personal Project (Claude Code) 2026

- Built a method that flags AI prompt injection attempts by looking at how the suspicious text is written and placed in a document (unfinished sentences, sudden formatting changes) instead of just matching keywords
- Wrote 10 test cases covering real injection attempts and text that only looks suspicious, then tested it using the Anthropic API; it got all 10 right
- Shared the skill and test suite publicly on GitHub

Western Regional Collegiate Cyber Defense Competition (WRCCDC), Blue Team 2024-2025

- Coordinated the team during competition, tracking assignments and ensuring injects were submitted before deadline
- Defended a live company network against a professional red team, keeping services running under sustained attack
- Completed timed security injects including firewall configuration, log analysis, and vulnerability patching

Rogue Access Point Security Research, University of Arizona Hackathon 2023

- Built a rogue access point with a captive portal to simulate credential harvesting and man-in-the-middle attacks, using Linux, hostapd, and dnsmasq
- Demonstrated public Wi-Fi exploitation live to a non-technical audience; recognized by competition judges

Cyber Skyline CTF, OSINT & Digital Forensics 2024

- Solved OSINT and digital forensics challenges under competition conditions using Autopsy, file carving, and metadata analysis
- Team placed in the top 100 nationally

WORK EXPERIENCE

International Outreach Student Assistant, University of Arizona 2023-2025

- Answered student and applicant emails on admissions, applications, and program logistics
- Coordinated outreach events for programs serving 200+ international students
- Communicated in both English and Arabic in a professional setting

Technical Support Intern, City High School 2022 (15 weeks)

- Repaired hardware issues on student laptops, including screens, batteries, and ports, across 50+ devices
- Troubleshoot Wi-Fi and system settings issues, and provided tech support to staff and students

Informal Technical Shadowing, CIRRIIS: shadowed a software developer; early exposure to C# and internal tooling 2022
